

CTO — Marie G. Evelyn, Ph.D.

With expertise in Computational Science, Marie oversees Summery's Engineering and Science teams, focusing on technology strategy, data privacy, system integration, solution design, and product development. Marie is driven by Summery's ability to quantify the qualitative aspects of individual values and organizational culture—to deliver "kindness at scale" for a better world.

She has co-founded a number of different organizations, from the New York chapter of the IEEE Computational Intelligence Society to the technology-based Brooklyn arts gallery Devotion. She holds a BA in Mathematics from Temple University and a PhD in Computational Biophysics from Columbia University. When not on her laptop, Marie can be found cooking with her husband, chasing after a curious toddler and a well-intentioned dog, or putzing around in her native-plant garden.

Say Hello to Summery

Summery delivers AI-driven applications that measure and assess individual values and organizational culture. By combining behavioral science with Machine Learning and Natural Language Processing (NLP), we activate and analyze stakeholder engagement and organizational cultural alignment.

Our core technologies, the Net Culture Score® (NCS) and The Kind Quiz®, are in use in 146 countries with multi-lingual capabilities. We are thrilled to work with partners such as the Bill & Melinda Gates Foundation, NASDAQ and Fortune 500 companies like Salesforce, and educational organizations like Stanford University and the California Community College system.
